MALIBU MIRAGE

# PIPER SINGULAR

If you long to fly in the jet stream and above the weather without being tethered to an uncomfortable oxygen mask, it's time to give careful consideration to one of the most serious cross-country airplanes in the world. The Piper Mirage is the only pressurized piston aircraft built today putting it, quite literally, in a class by itself. The restrained yet beautifully appointed cabin will allow your passengers to travel in the comfort of a business jet while you reap the financial benefits of a single-engine piston aircraft. For all its substance, however, the Mirage is not a heavy, cumbersome beast in the air. It is, after all, a Piper. And every Piper is built to be commanded by those who love to fly.

**A CLASS OF ONE.**

**Piper**<sup>®</sup>

**THE POWER TO TAKE YOU**

**WHERE YOU'VE NEVER BEEN.**

## **PIPER** **DYNAMIC**

Hidden beneath the stiletto nose of the Piper Mirage, is a 350 hp dual-turbocharged, intercooled Lycoming TIO-540-AE2A with the power to take you well into the flight levels. The Mirage can cruise at 213 kts and climb to a ceiling of 25,000 feet. The Hartzell 3-blade composite prop lowers vibration and noise, helping to make the Mirage one of the quietest and most relaxing piston aircraft in the sky. That will make those long trips more enjoyable for you and your passengers. Good thing, too, because the Mirage is capable of taking you 1,343 nm. That's farther than the best selling Very Light Jet.

# PIPER SOPHISTICATED

The fully-automatic pressurization system of the Mirage reduces pilot fatigue and keeps everyone comfortable with one simple setting, so you and your passengers arrive fresh, relaxed and ready to take on the world. The other systems of the Mirage are equally advanced and simplified. Engine functions are easily monitored from the large Multi Function Display in the center of the instrument panel. A dual-bus electrical system, dual alternators and dual vacuum pumps add more reassurance to an airplane that is easy to fly and easy to fall in love with.

**PRESSURIZATION WITHOUT THE PRESSURE.**

**Piper**<sup>®</sup>

## PIPER EXPANSIVE

From the moment you climb the airstair into the 49.5" wide cabin, you know you're in a different league of aircraft. Your passengers will enjoy roomy cabin-class comfort, with large windows that enhance the sense of space. They will ease into reclining leather seats, each with its own reading lamp and cupholder.

A writing table folds out to make room for work.

And they won't have to travel, crammed in with their luggage. A heated twenty-cubic-foot baggage area is accessible from within the cabin. A second compartment stows up to 100 additional pounds in the nose. The Mirage is an unequalled airplane every pilot loves to fly, every passenger loves to ride in, and everyone else wishes they owned.

**FEEL FREE TO MOVE ABOUT THE CABIN.**

# PIPER ENHANCED

The flight deck of the Piper Mirage has been redesigned to keep you comfortable and alert. There's more head and leg room now, along with inflatable lumbar supports beneath the rich leather seats.

The new Mirage G1000 option marries heightened situational awareness with unrivaled simplicity. The Garmin G1000 and GFC 700 autopilot suite seamlessly integrate navigation, communication and one of aviation's most advanced autopilots into one easy-to-use system. Dual 10" PFDs display synthetic vision, WAAS-certified GPS, optional traffic, terrain and XM weather/radio. An expansive 15" MFD makes it easier to manage engine functions, read electronic approach plates and Garmin's SafeTaxi airport diagrams. It's all controlled by an intuitive new console-mounted keypad to speed up

data entry and minimize workload. The fully-integrated GFC 700 digital autopilot features ultra-fast servos that instantly correct any deviation from perfect flight, while the jet-like panel-mounted mode controller makes it easier to keep your eyes on the instruments for safer IFR flying. For an even greater margin of comfort, an RDR-2000 color radar system is available.

The Mirage offers a choice of avionics designed for the way you fly and the missions you fly most.
